

Attention Operators!

Click on the “Inspection” link on any page of our website to view the latest inspection criteria for LM827-SA2, -SA7, -SA10 & -SA11 Engine Mount Assemblies

These instructions apply to Fairchild (now M7 Aerospace) model SA226 Metro and Merlin aircraft. Particular attention should be given to the blending and plating requirements to reworked parts in these assemblies.

RAPSCO, as the approved manufacturer for these Lord mount components, encourages all owners and operators to follow these inspections any time access is gained into the engine area, particularly during any engine removal, gearbox inspections and hot section inspections. As these inspections may become mandatory in the future, it is important to inspect these critical components when performing scheduled events in the engine area.

RAPSCO is the sole manufacturer and authorized distributor of Lord Corporation products for the aircraft models mentioned above. **Call us today for your Lord Mount requirements!**

At **RAPSCO**, we have many new PMA replacement parts in work today. Our mission is to obtain PMA for hard to find and excessively priced items and make them more available and affordable while improving the quality and technical application. Lowering aircraft operational costs by providing more value in replacement parts is our business.

Call us today for more information or email us at customerservice@RAPSCO.com
